**Exam** : **AD0-E101**

**Title** : Adobe Experience Manager Forms Architect

**Version** : DEMO

1.How should an AEW forms architect test any OSGi module before deployment to an environment?
A. Use automated JUnit tests to test the OSGI module during the build phase.
B. Use automated Apache Sling Tests to test the OSGi module during the build phase.
C. Use automated Robot Framework to test theOSGi module during the build phase.
D. Use Git to Mftt the OSGi module during a commit.
**Answer:** B

2.A client notices that the JavaScript within an Adaptive Form is not minified. This configuration enables end users to read Ajaxinvocations and reverse engineer endpoint input parameters.
What should an AEM Architect recommend to prevent this from occurring?
A. Disable JavaScript in the browser to prevent JavaScript invocations.
B. Enable Debug in the HTML Library Manager to obfuscate the JavaScript.
C. Enable minification and GZip in the HTML Library Manager.
D. Make sure to remove/etc/ from the HTML Library Manager.
**Answer:** A

3.A set of users installs the AEM Forms Mobile application on their cell phones. These users access the application in rural areas with limited Internet connectivity. The users must connect to an Internet hot-spot daily. Users are asked to connect to the hot-spot regularly.
Why does the application ask the users to connect?
A. The phone is checking for updates to the mobile application.
B. The hotspot is disabled m the system settings.
C. The user cache is synchronized with the server.
D. The process data and attachments are synchronized.
**Answer:** C

4.A client has more than 1.000 unique users who access AEM Forms and AEM Sites daily. The client is considering using TarMK.
What recommendation should the Architect provide to the client?
A. RDBMK is a more viable solution because it can serve 1.000 unique users content without any problems.
B. Amazon S3 repository is optimized for AEM instances.
C. TarMK is a viable solution but requires environments where n is the thousandth number of users.
D. TarMK is optimized to render content tor users for a single AEM instance.
**Answer:** A

5.A client must create and maintain multi-lingual sites. The system must support and deliver 20.000 transactions per day and support six languages. The client wants to automate this process so that the sites can be translated easily without too much human intervention.
Which two benefits does AEM provide to help the client maintain multi-lingual sites? (Choose two.)
A. AEM's Translation Integration framework works only with the Microsoft Translator.
B. AEM's Translation Integration framework can beextended with a custom connector.
C. AEM ships Hath its own translation service out-the-box that can be used in conjunction with workflows for translations.

D. AEM provides connectors to a variety of translation vendors.
**Answer:** A,C
